

THOM'S CUSTOM RECIPE

ALL VALUES ARE PER GALLON

rooted cuttings - 18 or 24 hours of light

	micro	grow	bloom	grozyme
week 1	2.5ml	5ml	2.5ml	4ml

When Transplanting:

Pre Soak grow medium with 18ml / gallon of Rhizotonic & fresh water.
First watering after transplant also use Rhizotonic & water.

vegetive stage - 18 or 24 hours of light

	micro	grow	bloom	Enggy's fulvic	grozyme
week 1	5ml	10ml	3ml	8ml	6ml
week 2	6ml	12ml	3ml	8ml	8ml
week 3	6ml	14ml	3ml	8ml	8ml

All transplanting should be done at least 1 week before switching to flower.

Transition to flower: (hardest time of a plants life)

All transplanting should be done. Make sure daytime temp is around 80°. Very important that nighttime temperatures stay above 70°, this will improve your internodal spacing & reduce stretching.
First week of flower keep your lights at least 24" above plants

flowering stage - 12 hours of light

	micro	grow	bloom	Enggy's fulvic	Liquid Carboload	grozyme	bud blood	big bud	kool bloom
week 1	6ml	8ml	8ml	8ml	4ml	8ml	2g		
week 2	6ml	3ml	12ml	8ml	4ml	8ml		2g	
week 3	7ml	3ml	14ml	8ml	4ml	8ml		2g	
week 4	8ml	4ml	16ml		4ml	8ml		2g	
week 5	8ml	4ml	16ml		4ml	8ml			1.5g
week 6	8ml		20ml		4ml	8ml			1.5g
week 7	8ml		20ml		4ml	8ml			1.5g
week 8	rinse with fresh water for entire 8th week								

Ripening stage:

Use fresh water only for minimum 7 days

Lowering temperature in dark cycle during last week will promote higher crystal & resin production.

If your plants become stressed at any stage:

Some stresses can be caused from: lights being too close / over fertilization / insect infestation / temperature fluxuation Raise the lights to 24" , water plants with 10 ml / gallon of grozyme and water for 2 waterings, when plants show signs of growth again, continue with regular feeding program.

Ensure that your plants dry out between watering. Once a month pass a lot of water (2X usual amount) through pot

If going 9 weeks of flower, repeat week 4 twice -- If going 7 weeks of flower, skip week 4

This is a good recipe for the "feed, feed & flush" method in soilless mixes
